OBJECTIVE

As a Computer Science student, I aim to begin my career in a reputed organization, applying my technical, problem-solving skills to real-world projects while learning new technologies and contributing to organizational growth.

EDUCATION

Malla Reddy College of Engineering, Hyderabad 2022 – 2026
B.Tech in Computer Science and Engineering
CGPA: 8.8

SKILLS

Technical Skills	Python, MySQL, Java, C
Web Technologies	HTML, CSS, JavaScript
Frameworks, Libraries	React.js, NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn
Tools , Platforms	Git, Github, VS Code, Jupyter Notebook, Google Colab

INTERNSHIPS

Machine Learning Intern, Infosys Springboard Dec 2025 – Feb 2026

- Built a Smart Energy Consumption Forecasting System using LSTM and Linear Regression, achieving 92% prediction accuracy on device-level energy data, enabling users to monitor appliance-wise energy usage and cost.
- Developed an interactive Flask-based dashboard with real-time visualizations, increasing engagement by 20%.
- Implemented an end-to-end ML pipeline (EDA, preprocessing, feature engineering, time-series modeling) and a smart recommendation engine to reduce energy wastage and improve overall system efficiency and performance.

Python Development Intern, Cognifyz Technologies Apr 2025 – May 2025

- Developed and optimized Python scripts for data handling and automation, improving efficiency by 20%.
- Contributed to two project integrations by debugging Python code, resolving issues, and improving reliability.
- Collaborated with a remote team of five members, while learning new tools and improving performance by 15%.

PROJECTS

Emergency Services Android App for Institution

- Developed an AI-powered One-Touch Emergency Services Android app for institutions, enabling users to instantly connect with police, medical, fire, rescue services, etc and notify nearest services and emergency contacts.
- Integrated emergency services into a single platform, allowing quick access and seamless assistance within app.
- Implemented real-time GPS tracking and AI logic to prioritize emergencies and optimize response time.

An Efficient Vote Casting System through Aadhaar Verification using BlockChain

- Developed a secure, tamper-proof digital voting system integrating Blockchain, Aadhaar-based verification, and IoT for real-time vote transmission, Reducing fraudulent voting and preventing 100% of double-voting issues.
- Enhanced transparency and efficiency through cost-effective management, reducing manual intervention by 70%.

Plant Disease Identification and Pesticides Recommendation ([GitHub Link](#))

- Solved a real-world problem helping farmers to detect plant diseases early using a CNN-based AI model with over 95% accuracy. Predictions are delivered within 2–3 seconds through a cost-effective Python web application.
- Integrated cloud services to store the trained CNN model and plant images, enabling location-based mapping to track disease, improved monitoring, and supported data-driven decision-making for early detection.

Analysis and Detection of Autism Spectrum Disorder ([GitHub Link](#))

- Built machine learning models (SVM, ANN, KNN, CNN) for the analysis and early detection of Autism Spectrum Disorder using behavioral and clinical data, achieving over 96% accuracy with the CNN model.
- Analyzed patient data and model predictions to identify key behavioral patterns, enabling faster and more reliable autism diagnosis with improved accuracy rates and overall system performance metrics and insights.

CERTIFICATIONS AND ACHIEVEMENTS

- Certified in Cyber Security by Cisco
- Completed Web Development course via Internshala
- Attended Workshop on Power BI by OfficeMaster
- Completed Python and Java courses on Udemy
- Participated in Data Analytics Workshop using Excel by Newton School
- National Merit Scholarship Finalist
